INSTALLATION

Location:
The Tjernlund Fan Prover can be mounted on any vertical surface within five (5) feet of the draft inducer. It must not be mounted on the inducer or any other surface with a temperature in excess of 190°F. Similarly, the temperature of the surrounding air must be less than 190°F.

Mounting:
1. Locate holes to be drilled using prover mounting foot as guide.
2. Drill two (2) 1/8” holes.
3. Use sheet metal screws enclosed to mount Fan Prover. **Diaphragm must be vertical** to ensure proper operation of switch, See Diagram.
4. Remove inducer from duct if previously installed.
5. **FOR MODEL D-3 ONLY** The Model D-3 Draft Inducers have two pressure sensing location knockouts. Location “A” should be used when the D-3 Draft Inducer is mounted on 7” or 8” diameter pipe. Location “B” should be used when the D-3 Draft Inducer is mounted on 5” or 6” diameter pipe.
6. Remove Draft Inducer sensing port knockout using a blade screwdriver and a pliers. Push male brass fitting through hole from inside housing and lock into position with brass hex nut. Tighten nut with wrench.
7. Unroll tubing and cut to desired length, using a tubing cutter or hack saw to provide squared, finished cuts. Cut ends should be free of any burrs or foreign material.
8. Slide brass connecting nuts over tubing and tighten brass fittings.
9. See electrical schematic for application which best represents your system.
10. All wiring must be done in accordance with the NEC and applicable local codes.

LIMITED WARRANTY

Tjernlund Products, Inc. warrants its components for one year from date of installation. This warranty covers defects in material and workmanship. This warranty does not cover normal maintenance, transportation or installation charges for replacement parts or any other service calls or repairs. Products that are tampered with, damaged, installed improperly, wired incorrectly or defective due to malfunctioning appliances are not covered under this warranty.

Tjernlund Products, Inc. will issue credit to the original distributor or provide a free part to replace one that becomes defective during the one year warranty period. If the part is over 18 months old, proof of date of the installation in the form of the contractor sales / installation receipt is necessary to prove the unit has been in service for under one year. All receipts should include the date code of the PS1505. This will help prevent possible credit refusal.

If the PS1505 is defective, return it to your Tjernlund distributor for replacement. If PS1505 date code is older than 18 months you will need to provide a copy of the original installation receipt to your distributor. Credit or replacement will only be issued to a Tjernlund distributor after the defective part has been returned prepaid to Tjernlund.

PURPOSE

The Tjernlund Fan Prover has been designed to monitor the pressure within the fan housing only. A motor or wheel failure will decrease housing pressure and deactivate the pressure switch, thus preventing combustion. The Fan Prover is not a safety control designed to ensure proper draft or to indicate chimney failure. It is the responsibility of the end user to properly maintain both the combustion equipment and its chimney or vent. Yearly maintenance and inspection should be conducted by qualified service personnel. Failure to follow such maintenance and inspection procedures may result in generation of toxic carbon monoxide gas.

GAS WIRING TO ANY APPLIANCE EQUIPPED WITH 24V CONTROLS - NO POST-PURGE RELAY/TIMER ON DRAFT INDUCER

COMPONENTS NEEDED:
1. DRAFT INDUCER
2. PS1505 FAN PROVER
3. 24/115V RELAY
   USE 950-1040 FOR MODELS DJ3 & D3
   USE 950-1016 FOR MODELS I, IL, XL

GAS WIRING TO ANY APPLIANCE WITH MILLIVOLT CONTROLS - REQUIRES POST-PURGE RELAY/TIMER ON DRAFT INDUCER (DRAFT INDUCER MOTOR LESS THAN 4.4 AMPS) MODELS I, IL, XL MUST USE 950-0483 ISOLATION RELAY

COMPONENTS NEEDED:
1. DRAFT INDUCER
2. RELAY/TIMER 950-1067
   MAXIMUM AMP LOAD IS 4.4 AMPS. USE ISOLATION RELAY ON RELAY/TIMER IF MOTOR IS OVER 4.4 AMPS. SEE ISOLATION RELAY DIAGRAM TOP RIGHT.
3. WHK-I KIT
4. 950-0470 THERMOCOUPLE JUNCTION ADAPTER (FOR RESIDENTIAL WATER HEATERS ONLY)

GAS WIRING TO ANY APPLIANCE WITH MILLIVOLT CONTROLS - REQUIRES POST-PURGE RELAY/TIMER ON DRAFT INDUCER (DRAFT INDUCER MOTOR LESS THAN 4.4 AMPS) MODELS I, IL, XL MUST USE 950-0483 ISOLATION RELAY

COMPONENTS NEEDED:
1. DRAFT INDUCER
2. PS1505 FAN PROVER
3. 24/115V RELAY
   USE 950-1040 FOR MODELS DJ3 & D3
   USE 950-1016 FOR MODELS I, IL, XL
